

Tolulope Gideon Babajide

AI Builder | Full-Stack Engineer | Cybersecurity Analyst | MSc Computing

London, UK | 07887 594 531 | babajidetgideon@gmail.com | btgideon.dev | github.com/TolulopeBabajide

PROFILE

AI builder and MSc Computing student (University of Roehampton, graduating 2026) with experience across AI product development, cybersecurity, and full-stack engineering. Built two AI-powered products from scratch, designed agent workflows, secure backend systems, and scalable architectures. Background in enterprise sales brings strong product thinking and stakeholder communication to every project.

AI PRODUCTS AND ENGINEERING PROJECTS

Agentic Development Workflow System AI Systems Engineering May 2026 - present

Claude AI SDK | MCP | 33 Specialised AI Skills | 23 Scheduled Workflows | Automated CI/CD

- Built an agentic development workflow of 33 specialised AI skills and 23 automated scheduled tasks covering testing, code review, security auditing, CI/CD checks, and quality monitoring. The system runs every hour without manual input.
- Generates a daily briefing summarising build results, failed tests, security findings, and outstanding tasks, turning reactive firefighting into a managed, visible process.

Proven across two active projects (Planacle and Awade): has caught real regressions, surfaced technical debt automatically, and maintained code quality without manual prompting.

Planacle (Social Planner) Personal Project (in active development) Nov 2025 - Present

Google Gemini AI Agent | TypeScript | React | Firebase | Schulze Voting | Gale-Shapley Matching | Playwright E2E | k6 Load Testing

- Built an AI product that removes group event planning friction: members submit availability and preferences, and a multi-step Gemini AI agent pipeline generates a complete venue and itinerary recommendation. No group chats, no spreadsheets needed.
- Implemented two decision algorithms from scratch: the Schulze method (a voting algorithm that surfaces the option most people genuinely prefer) and Gale-Shapley stable matching (ensures groups are fairly assigned to venues). Full unit test coverage on both.
- Built to production standard: protection against AI prompt manipulation, request rate limiting, and response caching to reduce costs. Load tested under concurrent traffic and covered by an automated end-to-end test suite across all critical user flows.

Awade (AI Adaptive Learning Platform) MSc Dissertation Project May 2025 - Sep 2025

Python / FastAPI | PostgreSQL | Redis Task Queue | OpenAI + Google Gemini | Docker | Railway | Vercel | JWT + RBAC

- Built a platform that lets educators generate personalised lesson content using AI in seconds, removing a significant manual planning burden. Supports two AI providers (OpenAI and Google Gemini) with a provider abstraction layer, so the platform keeps working if one API is unavailable.
- Eliminated AI response timeouts by moving generation into a Redis background task queue: requests return immediately while AI processes in the background. Optimised the lesson resource generator from 6 database queries to 3 on the same code path.
- Designed with school-level security from day one: JWT with refresh token rotation, Google SSO, role-based access for teachers and administrators, and strict input validation throughout.

BookOrbit Academic Team Project, Backend Lead Feb 2025 - Apr 2025

Node.js | Express | MySQL | Sequelize | Role-Based Access Control | bcrypt | Security Best Practices

- Led backend development for a complete digital library: role-based access control, bcrypt password hashing, brute-force rate limiting, session persistence, and structured security logging from the first release.

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst Cyblack UK

Oct 2025 - Present

- Reduced security risk for enterprise clients by identifying and prioritising vulnerabilities using Nessus, Burp Suite, and WPScan, then producing clear remediation plans ranked by severity and business impact.
- Deployed monitoring across client infrastructure and used threat intelligence tools to track live cyber campaigns, enabling clients to act before threats become incidents.
- Produced executive security summaries that translate technical findings into plain language, giving non-technical leadership the information they need to make decisions.

IT Support Specialist Send Me Global Logistics, Nigeria

Jan 2024 - Sep 2024

- Maintained user accounts, access permissions, and system controls to ITIL standards for a live logistics operation; provided first-line support across hardware, software, and networking.

Sales Executive Lifepage Properties and Investments, Nigeria

Oct 2022 - Sep 2024

- Closed over 1 billion Naira (~500k GBP) in property transactions in a year, with an 80% conversion rate on qualified leads.
- Grew business-to-business revenue by 20% through strategic corporate partnerships developed beyond the existing client pipeline.

Founder Leathern by Jyde

July 2017 - Oct 2022

- Delivered over 1,000 custom footwear orders and served more than 200 clients, managing all product design, customer acquisition, and operations independently.
- Trained apprentices in craft and production processes, demonstrating the ability to build and lead a small team from the ground up.
- Built a sustainable business over five years through repeat custom and referrals, showing commercial instinct and delivery consistency well before entering the technology industry.

TECHNICAL SKILLS

AI and Agents	Gemini, OpenAI GPT, Claude AI SDK, MCP, multi-agent workflow design
Languages	Python, TypeScript, JavaScript, SQL, HTML / CSS
Backend	FastAPI, Node.js, Express, Pydantic, Sequelize ORM
Frontend	React, Tailwind CSS, Vite
Infrastructure	Docker, GitHub Actions CI/CD, Railway, Vercel, Firebase, AWS S3
Security	OWASP, Nessus, Burp Suite, WPScan, Vulnerability Assessment, Incident Response, SOC Operations, MITRE ATT&CK, OpenCTI, Zabbix, CVSS
Testing	Playwright (browser automation), k6 (load testing), pytest, Vitest
Databases	PostgreSQL, MySQL, Redis, MongoDB, Firestore

EDUCATION

MSc Computing University of Roehampton, London

2024 - 2026

Dissertation: Awade (AI Adaptive Learning Platform). Modules: Software Development, Cybersecurity, Databases, HCI, Research Methods.

Full-Stack Development Bootcamp (MERN Stack) GOMYCODE

2023

BTech Industrial Chemistry Federal University of Technology Akure, Nigeria

2013 - 2018
